LimeHelmet

Helmet Rental Kiosk

Introducing face detection API technology

Anh Mai-Summer 2018

1-CREATIVE BRIEF

Client

LimeBike is a bicycle-sharing company launched in June 2017 based in San Mateo, California. It operates dockless bicycle-sharing systems in several cities and college campuses across the United States.

Limebike's mission is to provide a sustainable solution to the first and last mile transportation problem by helping people move around their cities in an affordable and convenient way while eliminating their carbon footprint.

LimeHelmet kiosk launch with the goal of encouraging more users to use helmets when biking. Moreover, the kiosk is where biker can rent their helmets with LimeBike by using face detection technology.

1-CREATIVE BRIEF

Purpose

For the bike helmet to protect you, it needs to fit accurately. By using the face detection technology, the kiosk will be able to measure biker's head within seconds. It will take the biker's head measurements then give the appropriate helmet size for them.

Client Expectation

- The design is simple and easy to use for bikers
- Increase the use of helmets when cycling from 3/20 in Feb to 15/20 bikers in Feb 2018.
- Increasing the revenues from 500 millions in Jan to 1.1 billions in Aug 2018.

Target Audiences

- LimeBiker users
- Tourists
- Cyclists aged 18 - 45
- Urban areas
- Health concerned

Solutions

Develop the kiosk that is simple and easy to use. LimeHelmet will provide a rental helmet kiosk for LimeBike users. An automated vending machine that will dispense helmets for a small fee will also apart of the project.

The kiosk design will improve the lack of sanitation from competitors. Following each rental, LimeHelmet will sanitize and inspect each helmet before handing it to users. Users have an option to keep track on cleaning processes before they get the helmet on their hands.

Limehelmet also ensures that each kiosk will remains continually stocked with enough helmets to meet the community's need.

2 - COMPETITIVE ANALYSIS

HelmetHub

Features

- City Maps
- User manual
- Payment instruction
- Solar power
- Real-time analytics
- Each machine can hold 36 helmets.
- Touch screen system to help deploy the safety gear.
- Sent to the company's headquarters to be cleaned and sanitized before the next customer.

Design

- Simple color scheme
- Effective use of illustrators
- Large screen display
- Helmet tray display

2 - COMPETITIVE ANALYSIS

MelBourneBikeShare

Features

- Refrigerator Display
- User manual
- Payment instruction
- Each machine can hold 30 helmets.
- Returned at 7-Eleven stores for cleaning, disinfection and lining replacement.

Design

- Bright color scheme
- Transparent machine design
- Large screen display

3 - FEATURES

Instruction

- Provide clear step by step instructions for users.
- LimBike user required (There will be an option to signup for LimeBike account)

Measure your size

- Camera Scanning
- Visual direction instructions
- Option to Re-do
- Giving the best size

Rental Review

- Information about the size, the rental period

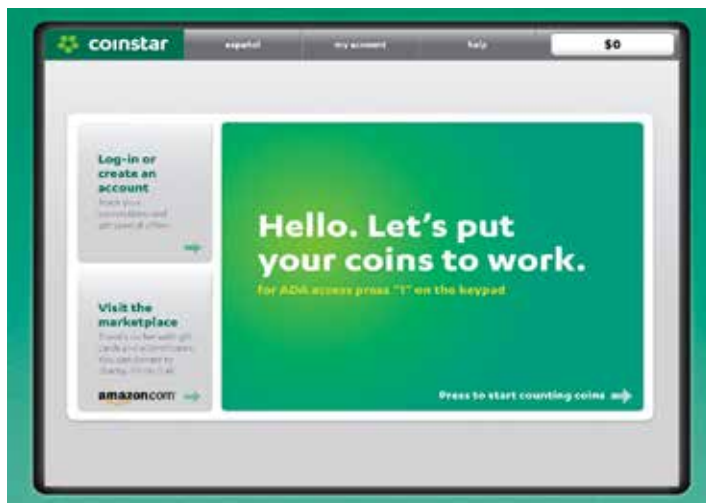

Payment

- Payment process before ready to go

9 - USABILITY TESTING

The usability test mainly focused on the following perspectives:

- Overall user flow
- The interaction between users and functions
- Time-consuming (How long does it take users to figure out)
- Effectiveness of navigation
- Overall design criteria (icons, text, layout..)

Participant Qualifications

- Aged 18-35
- Safety preferred
- Existing LimeBike users for updating testing and new potential users.
- Biking more than two times per week

Tasks

- *You are a new user who is bike with LimeBike and going to rent a helmet in the LimeHelmet kiosk.*
 - You want to know how to use LimeHelmet.
- *Choose the helmet size that suits you best*
 - Follow the direction when measuring your head.
- *Review your rental*
 - You want to rent your helmet for 30 mins.
- *Payment*
 - Pay with your saved card

9 - USABILITY TESTING

I tested six users. Here are the paper testing results:

- All of them suggested removing the "measure your hat size" section since LimeHelmet already gives a measurement.
- The colors are very consistent and associated with LimeBike brand
- The user flow was smooth and simple
- The navigation arrows should be bigger for users to see and interact with the big screen like the kiosk.
- One user suggested having "Pay as you go" added into rental time to give them more flexibility.
- Four users were concerned about the payment process, they asked for more options to choose from.

Changes

- Add some missing features as suggested by the usability test.
- Move the "SignIn" page to the first, since becoming a Limebike user is required.
- There should be a confirmation page after done with renting.
- Makes navigation buttons bigger and move it to the bottom of the screen for users easy to navigate.
- Other details as suggested by usability testing.
